

The active ingredient is a naturally occurring molecule found in the potato. Once applied, it penetrates the potato skin to maintain and restore dormancy. The effects are fully reversible. This product can be used successfully on all common varieties of seed potatoes.

Benefits

- **Keeps Potatoes Dormant** in storage bins that have been warmed up during partial shipments
- **Stabilizes Dormancy** to maximize seed vigor at field planting
- **Helps Reduce Shrink** for more salable product weight

Your Seed Potato Management *EXPERTS*

Treat seed potatoes with 1,4SEED® throughout the storage season to maintain correct residues. Label guidelines allow for final application 30 days before planting. Using 1,4SEED® increases seed vigor at planting!
